PROFESSIONAL SUMMARY

Full Stack software engineer focused on high-performance backend systems and Artificial Intelligence, with professional practice since 2022. I design and deploy low-latency systems in Rust and Node.js, Retrieval-Augmented Generation (RAG) architectures in Python, and real-time communication over WebSockets. Founder and architect of **dropaudioccs.com**, a complete e-commerce platform in production. I combine systems engineering, computer vision, and end-to-end web development.

TECHNICAL SKILLS

Languages	Rust, Python, TypeScript, JavaScript (ES6+), C++, SQL, HTML5, CSS3
Backend & AI	Tokio, Axum, Rocket, FastAPI, Node.js/Express, RAG systems, WebSockets, gRPC
Frontend	Vue 3, Nuxt 3, React / React Native, Tailwind CSS, Bootstrap 5
Data & Cloud	PostgreSQL, MySQL, Supabase, Redis, MongoDB, AWS (EC2, S3, RDS, Lambda), Docker, Git, Vercel
Focus areas	Low-latency architecture, concurrency, performance optimization, computer vision, interpolation algorithms

PROFESSIONAL EXPERIENCE

Founder & Software Architect2025 — PresentRemote

DropAudio CCS — dropaudioccs.com

- Designed and shipped a complete e-commerce platform to production (public storefront + admin panel) on Nuxt 3 (Vue 3, SSR/Nitro) and Supabase (PostgreSQL with RLS, Auth, Storage, and Realtime), deployed on Vercel.
- Built conversion-focused modules: an interactive 3-step audio recommender, a head-to-head technical comparator, and an automatic bundle configurator that resolves hardware incompatibilities (DAC Type-C adapters).
- Integrated the WhatsApp API and a custom multi-currency checkout (USDT, Zinli, Pago Móvil) with live BCV/USDT rates, and consolidated 94 verified reviews as social proof.
- Implemented a resilient architecture with a fallback catalog for outages, technical SEO/GEO (JSON-LD, sitemap, PWA), and automated Web Push notifications with pg_cron.

Full Stack Developer & Software ConsultantJan 2022 — PresentCaracas, Venezuela · Remote

Freelance / Independent contracts

- Designed and deployed scalable backend architectures in Rust and Node.js, achieving a 40% reduction in server response times on high-concurrency systems.
- Implemented real-time bidirectional communication channels with WebSockets for interactive applications and financial control dashboards.
- Integrated and tuned RAG-based AI systems in Python, improving query accuracy over large knowledge bases.
- Administered cloud infrastructure on AWS (EC2, S3, RDS, Lambda), ensuring high availability and efficient backups over MySQL/PostgreSQL.

Technology Infrastructure Project LeadFeb 2026 — Mar 2026Miranda, Venezuela

University Community Service (120 hours)

- Planned and executed a technology-infrastructure modernization project for an educational institution, structured with project-management methodologies (Gantt charts).
- Designed and delivered an Information Technology training program for academic staff and students.

FEATURED PROJECTS

RealtimeVoiceAssistantRust · Python · Gemini Live

Real-time conversational voice assistant: streaming transcription, NLP, and speech synthesis, with an asynchronous Rust runtime.

System_Stabilization_Interpolation

Python · PyTorch · OpenCV — Undergraduate thesis

Mobile video stabilization with deep learning and mathematical interpolation; architecture optimized for real-time processing with numerical-precision control to prevent critical rounding errors.

EDUCATION

B.Sc. in Computer Science (Licenciatura en Computación)

Graduation: April 2026

LUZ-IUTA (University of Zulia — University Institute of Technology), Venezuela

LANGUAGES

Spanish — Native. · English — B1 (technical reading and writing; professional communication).
